DISASTER RECOVERY
SCENARIO TESTING

Protect and maintain Business Continuity

BENEFITS

- Save costs of testing through automation

- Add simulated users and find the breaking point for Disaster Recovery services and applications

- Confidence in readiness should a Disaster Recovery event occur

- Test desktops and applications at scale with end-user response time metrics

- Discover and diagnose poorly performing applications/systems in the failover environment

- Optimise at scale in Disaster Recovery environment before failover

ABOUT INTELLIGERE

With more than two decades of experience, Intelligere is a trusted partner across business sectors.

Offering comprehensive Strategies, solutions, supply and services that help companies meet the ever-expanding computing challenges of today's IT environment.

To protect and maintain business continuity is key for any business, where, organisations have to prepare for the unexpected. For this reason, large organisations spend much time and money to ensure that their IT infrastructure will survive any (natural or human-caused) disaster.

Intelligere has partnered with Login VSI to offer enterprises a complete service to safeguard the disaster recovery environment by testing and verifying Disaster Recovery scenarios based on proven industry standard virtual (synthetic) user technology.

Login VSI is typically used in VDI-related IT Infrastructures to execute and test different disaster scenarios, such as:

- Head Office outage and all staff try to connect to their applications from remote locations (e.g. Site Disaster or adverse weather)

- Will the system hold if, after a power failure, 10,000 users log-on in a few minutes time

- Will the failover system hold the extra numbers if we must move all users from the primary system because of an unexpected total stand-still.

UXP Index · Compatibility Testing · Load Testing · Performance Testing

Login Enterprise enables enterprises to test their IT systems for real-world failover and recovery scenarios at max concurrency, ultimately leading to ease-of-mind and a non-stop production environment.

Login Enterprise can simulate your real-users with production-like workloads to make sure you have all the capacity you need.

Get in touch today to discover how we can support you to deliver a truly exceptional end user experience.
