New solutions have given rise to new capabilities, but they have also opened the doors to new challenges and new regulations. The rapid pace of this evolution has forced businesses to rethink their traditional ways of operating to ensure systems and processes are optimised for the current realities of the business world.

The EUC Strategy engagement service delivers an independent, high-level strategy and roadmap; focussing not only on delivering the business case for the target operating state, but also focuses on the journey and investment required.

Each organisation will require a unique technology and workspace strategy but will benefit from a structured framework that guides them through the process of transforming their people, processes and technology.

Our approach understands the business strategy, objectives and constraints, and map these against the current technology estate to identify and advise on the key decisions that need to be made.

We recommend technology and service options in a clear and independent manner and identify potential cost savings and performance improvements.

The resultant report includes customer specific cost models and recommendations based on the extensive technical knowledge we have in our business and the experience we have built up from the delivery of strategic, transformational programmes.
