Businesses have focussed on ensuring their IT environment is protected through Disaster Recovery Solutions and impact on the loss of a Data Centre environment, but how do you ensure Business Continuity in the event of loss of office facilities?

As the Coronavirus (COVID-19) outbreak continues to affect the UK, there is a real chance that office facilities become unavailable. As the UK Chief Medical Officers have raised the risk to the public from low to moderate, businesses must now plan for reduction in staff travel and possible home working.

Intelligere offers solutions to meet business needs and has partnered with IGEL, offering **SIMPLE, SMART** and **SECURE** solutions that are disrupting how IT delivers end-user computing.

Combined with IGEL Workspace Edition, the UD Pocket is a powerful integrated solution for evolving workspace environments. UD Pocket enables remote and mobile workers access to cloud services, server-based computing applications or virtual desktops.

Staff will have immediate access to the same applications and resources as their colleagues back in HQ, as well as a device that is remotely manageable. That includes security patches, upgrades for all supported software, plug-ins and applications.

The IGEL UD Pocket is a valuable tool for keeping remote workers connected to a virtual network solution, giving them fast, secure and easily manageable access to devices and applications.

Why work harder than you need to? Get in touch today to discover how we can support you to deliver a truly exceptional end user experience.
