Windows Virtual Desktop (WVD) is a comprehensive desktop and application virtualisation service running in Azure and is the only virtual desktop infrastructure (VDI) that delivers simplified management, Windows 10 Enterprise multi-session, optimisations for Office 365 ProPlus, and support for Remote Desktop Services (RDS) environments.

Intelligere have long standing successful partnerships with **Login VSI** and **IGEL** both approved Microsoft providers for Windows Virtual Desktop services.

It's clear that WVD brings a host of capabilities that promise to make enterprise end user computing more powerful, convenient, and economical for organizations around the globe. Intelligere is in the unique position of being able to offer expertise and unparalleled partner capability to deliver your WVD solution.

Simple, Secure WVD Access with IGEL OS

IGEL adds the perfect complement to WVD with IGEL OS, the next-gen edge OS for cloud workspaces. During Microsoft Ignite in November 2019, Brad Anderson, Corporate Vice President for Microsoft 365, stated that it was enabling Linux device support for Windows Virtual Desktop, naming IGEL as a "key hardware partner."

Login VSI has been supporting Windows Virtual Desktop performance testing since 2019 and has performed hundreds of tests to evaluate the performance profile of Windows 10 multi-session. This testing has been focused on maximising the end-user experience for WVD in the areas of scalability, login performance and cost optimisation.

Why work harder than you need to? Get in touch today to discover how we can support you to deliver a truly exceptional end user experience.
